## Town Council Met Wednesday of This Week

Date For Tax Sale Was Set For September 15th

As last Monday was a public holiday the town council did not hold its regular meeting until Wednesday evening. Mayor Sangster and councillors Shaw, Rindahl, Evans, Buchholz, Hope and Willis were present.

At the opening of the meeting the council sat as a court of revision. Only two complaints were registered but council decided to endorse the assessment as set by the assessor.

Mr Walter Fitzhenry waited on council concerning a proposition re arrangements for redeeming his property. A satisfactory arrangement was made.

Amotion was passed for a clean up of the town by the citizens and that town remove the rubbish. Clean up to be done between June 7th and 12th.

The School Board's request for $1025 for school purposes was approved for payment.

Mr McGimpsey made application for the purchase of a brick building on Fifth St. The price was set at $50.

Dr Robinson, M L A, wrote council stating that the minister of Public Works would be in this district next June and on that occasion, matters which were referred to Dr Robinson would be taken up with the council by the minister at that time

The Mayor and secretary were instructed to write the Canadian Western Power and Fuel Co and the Medicine Hat City Council outlining plans for the arrangement of securing electric power within the town.

Monthly accounts as passed by the finance committee were approved for payment.

Councillor Hope moved that streets from the school south and west be gravelled by local teamsters and same be overseen by the town foreman — carried

Councillor Buchholz was appointed deputy mayor for the next three months.

The date for the holding of the annual tax sale was set for September 15th 1937.

Hon Mr Fallow objects to being criticized on account of recent dismissals in his department. Says Mr Fallow:—

"I do not believe that barbers, dentists, preachers or others, for example have an understanding of the problem and feel that they are not qualified to pass judgement."

To which the retort courteous might be made that it is doubtful if an ex-station agent, having neither the training nor the aptitude for the position he holds, is any too well qualified either Vegerville Observer

## Redcliff Young Couple Married May the 8th

Evans — Smith

A quet wedding took place in St Ambrose church on Saturday morning May 8th when Miss Jennie Louise Smith, daughter of Mr and Mrs Wm Smith was united in wedlock to Mr George D Evans, son of Mr and Mrs Caradock Evans. Rev H S Hamnett officiated.

After the ceremony the immediate friends assembled at the home of the bride's parents where a dainty wedding breakfast was served.

The young couple will reside in Redcliff.

## Redcliff Dogs Make Good Showing at Hat

Two Cups Won By The Redcliff Exhibits

In the dog show held in Medicine Hat last Monday the Redcliff Legion cup was won by N Meldrom's spaniel dog as the best entry from Redcliff.

For the best opposite sex from Redcliff the cup from the Club Cafe was won by a pomeranian bitch owned by Miss Johansen. This same bitch won second prize in the open class in which there were several entries. A Winnipeg lady won first.

In the springer spaniels, Canadian bred E T Cooke Redcliff won first prize.

In cocker spaniels dog class N Meldrum won first prize with "Payday of Barrie," in the same breed his bitch "Princess Pat" also won first prize.

Miss Jean Maillard paid a visit to friends in Calgary for a few days last week.

## Churches

GORDON MEMORIAL UNITED CHUCRCH

Rev H S Ellison Pastor

11 a m Church School

11:15 morning worship Subject Speker Mr C G Pow

7:30 p m Youth Night Service

A special invitation is extended to everyone to attend this service.

## Large Number of Dismissals in The Civil Service

Nearly 1000 New Appointments By Aberhart Government

According to a statement published, retirements from the provincial civil service, either through dismissals or retirement, officially inspired or voluntary, and with a small number of superannuations, have reached a total of more than five hundred since the Aberhart Government went into office. Up to last month, 232 members of the permanent staff had been retired, besides 227 of the temporary staff, and 32 superannuated. A return brought down in the legislature during the recent session showed that nearly one thousand new appointments had been made since the government took office, or over four hundred increase in the number of the government payroll

These figures lend credence to the assertion of the Edmonton Journal that wholesale changes in the civil service are not inspired by an ambition to improve the service, but to build up a political machine subservient to the Social Credit Government, and which will carry out orders according to ministerial decree.

* * *

Mr J A King, formerly of Medicine Hat, has been promoted to the position of chief inspector of the provincial sales tax branch A Mara, previous inspector has been dismissed

* * *

It is said that the civil servants and other provincial government employees greet each other in the early morning thus.

"Good morning; have you been fired yet?"

SWIMMING POOL MEETING

The annual meeting of the local Swimming Pool Asso. will be held in the Legion reading room on Monday evening, May 31st at 8 o'clock to reorganize for the season. All interested are requested to attend.

## Douglas ty Send Expert to Alberta

To Inquire Into Situation In Alberta

Reports from G L MacLachlan, S C member who was sent to England to interview Major Douglas, state that Douglas has agreed to send two Social Credit experts to Alberta to inquire into the situation here and co-operate with the appointed commission.

These experts will look into the whole situation and report to Mr Douglas and if this is satisfactory Mr MacLachlan reports Douglas will then come to Edmonton to help put Social Credit in operation.

Major Douglas pointed out that S C progress had been impeded by increased taxation and other orthodox measures allowed to continue in Alberta,

* * *

Premier Aberhart and his Cabinet have been requested by ex-service men to meet them this week-end for an explanation of the government's policy in dismissing members of War Veterans from the civil service "without adequate cause."

* * *

Mr Joe Bergeron is having a pergola erected on the front of his store. When finished and painted it will make a big improvement to the appearance of his store and will also make a fine protection from the sun. It will look up-to-date

## Fine Entertainment Here Last Friday

Was Put On By Pupils of Miss Colter

The Little Theatre Building was well filled last Friday evening for the entertainment which was put on by Miss Colter's pupils under the auspices of the local Social Credit Group.

There was a very lengthy program of a splendid variety of items which was thoroughly enjoyed by all present. The several dancing selections were very cleverly done and the other skits brought great applause.

On the whole the entertainment was a great success.

## Canada Bought Less Flour When Cheapest

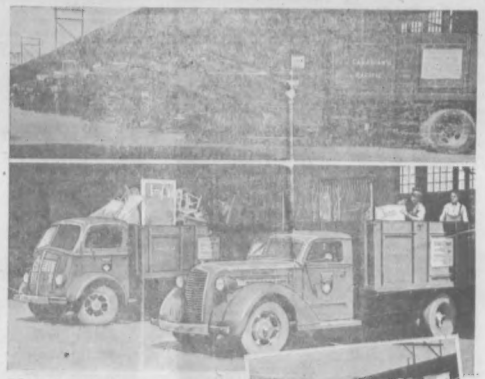
This Was Brought Out At The Grain Commission

Information brought out at the Turgeron Royal Grain Inquiry commission by Mr McFarland revealed a surprising situation in connection with the consumption of wheat in Canada. Mr McFarland stated: "I have reason to know we had abundance available and at prices lower than it cost our unfortunate farmers to produce it but, despite this fact, it is a matter of record that the consumption of wheat flower in Canada was larger prior to 1930, when our prices were high, than it was since 1930 when our wheat was very cheap and our population larger."

Mr McFarland explained that large groups of Canadians were advocating a policy of feeding Canada's surplus on the prairies regardless of price.

Mrs G Davies and Miss Sarah spent a few days in Calgary this week visiting friends

## Canadian Pacific New Freight Service



Montreal freight shippers are enjoying the fastest pick-up and delivery service in Canada since the inauguration of the Canadian Pacific Railway's new Cartage Department for the pick-up and delivery of railway freight.

Ninety-two brand new trucks, of a heavy type, from two to five tons, were bought especially for this new Canadian experiment, which is designed to handle freight with all the speed and efficiency of express shipments. Built for local delivery and pick-up of freight, in carload lots or less, the 92 trucks form a rapid and steady stream of communication between the Canadian Pacific freight sheds in Montreal and the city's shippers. By eliminating much of the handling of freight and instilling the Canadian Pacific motto for fast service into this end of freight traffic, the new trucks are speeding up the service in a degree previously unknown. Although this service has also been introduced to Ottawa and other centres, Montreal will be the main testing ground.

Illustrations above show a section of the line of trucks at Place Viger freight sheds in Montreal, two of the trucks being loaded from the warehouse, and a loaded truck on its way to the door of some business house.

## Little Theatre Association Has Now Disbanded

Decision Reached at Meeting Held Last Tuesday

The annual meeting of the Little Theatre Asso was held in the rotunda of the hotel on Tuesday evening.

Owing to lack of public interest and support it was decided to disband and make no further attempt to carry on with Little Theatre work.

All property of the Asso was given to the school.

If arrangements can be made with the town council to have the use of the theatre building indefinitely as a school auditorium the equipment there will be left intact for use by the school only. If no such arrangements can be made, however, the equipment including curtains, scenery stoves gas fixtures etc will be removed to the school and the extra chairs loaned returned to the owners.

This means that the theatre building will no longer be open for entertainments by lodges, churches, or other organizations

There is now no public theatre in Redcliff and all those interested in dramatic work will be compelled to seek an outlet for their dramatic enthusiasm by joining the Medicine Hat Little Theatre Association.

## If Defeated, Premier Wants New Election

So Stated Aberhart at Meeting Last Week End

If insurgent Social Crediters gained control at the adjourned session of the Alberta legislature scheduled to start June 7th Premier Aberhart would be "inclined" to ask the lieutenant-governor for a general election rather than recommend that an insurgent member be called upon to form a government

The Premier made that statement at a rally in Calgary 40 miles northeast of Edmonton. Hon W A Fallow, minister of public works; Hon D B Mullen, new minister of Agriculture, and Samuel Calvert, Social Credit member of the legislature for Victoria constituency in which Chipman is situated were other speakers.

It is reported that grasshoppers are now hatching and farmers are advised to watch carefully to prevent heavy losses.

* * *

While practising on the baseball field last Tuesday Chas. Sivell met with a nasty accident when a thrown ball struck him on the nose as he was turning around, causing a nasty fracture

* * *

Gordon Memorial C G I T groups entertained their mothers to a dinner in the school room last Friday evening. The room was nicely decorated with the club's colors and a very appetising dinner was served after which a most interesting program was conducted.

Most appropriate toasts were given followed by a musical program, recitations, etc.

# Scientist Makes Prediction That Individuals May Have Life Prolonged Indefinitely

In a scientific definition of death new in scope, Dr. Alexis Carrel, Rockefeller Institute scientist, predicted that it may become possible to suspend human life and to start it again, living several centuries. Dr. Carrel is the man who showed the physical immortality of a chicken heart, which has been kept living by itself for 24 years at the Institute. For him Col. Charles A. Lindbergh last summer perfected an artificial heart which keeps whole organs alive outside the body.

Dr. Carrel's new definition was made in a talk to the New York Academy of Medicine on "The Mystery of Death."

He defined two kinds of death—reversible and irreversible. Out of the first come man's hopes for better health and longer life.

A possibility "very remote" is suspension of life.

It is reasonable, Dr. Carrel held, to suppose that part of the human personality may escape death. Present scientific facts neither prove nor disprove this after life.

All of these points Dr. Carrel emphasized in a written summary of his report to the academy.

"If science is allowed to go on eight or 10 centuries, disease may perhaps be suppressed," Dr. Carrel said. "But there is no hope of ever conquering senescence and death.

"There are only three ways to die —by failure of the heart, or of the central nervous system, or by alterations in the composition of the blood.

"Deaths are reversible or irreversible. An example of reversible death is a man stabbed though the heart. Circulation and respiration stops. The man is legally dead. However, he is not hopelessly dead. If proper treatment were applied he would be resuscitate. All his organs, even his brain, are still alive.

"A few minutes later comes irreversible death. At this stage resuscitation is no longer possible, because of distintegration of the brain and the spinal centres."

Even after irreversible death has set in, he said, "the body is still almost entirely alive." The organs and tissues begin to die, each in its turn.

Dr. Carrel recited the claim of spiritists that survival of the soul has been demonstrated and the principal points in favor of this claim.

"The importance of the facts on which such speculations are based cannot be denied," he said, "but the interpretation of the experimental results seem to be incorrect. The spiritists neglect the fact of the existence of clairvoyance.

"Nevertheless, we know positively that clairvoyants are capable of perceiving past and future events. Therefore it is not possible to make a distinction between the survival of a psychic principle and a phenomenon of clairvoyance.

"There is no scientific proof, at the present time, of the survival after death of the mind, but no one has the right to say that such survival is impossible.

"It is far from being unreasonable to believe that some part of human personality may escape death."

He said some day almost every individual may die of old age only.

"Can we progress further?" he asked. "Perhaps, if we learn more about these mechanisms of life that bring about death. The problem can be attacked in different ways.

"The first one consists of analyzing the conditions responsible for the aging tissues.

"A second manner of opposing death is the search for the physiological factors that determine longevity."

These he explained as heredity, diet and mode of living, the latter two already in early stages of practicability.

"Death could also be retarded," he said, "by a rejuvenation operation. Through this operation the subject would be carried back to a previous stage of his life."

"It is not impossible that, in the course of the next two or three centuries, rejuvenation procedures will be brought within the reach of medicine.

"There is a fourth, although very remote, possibility of postponing for a long period of time the death of a few individuals.

"It is known that certain animals, such as the small arthropod, tardigrandum, stop their metabolism when they are dried. A condition of latent life is thus induced. If after a lapse of several weeks, one moistens these desiccated animals, they revive and are capable of leading normal life again.

"Although a tardigrandum contains highly differentiated cells, such as nervous cells, it is capable of standing the rough treatment of being dried. Long ago it was reported by Paul Bert that the tail of a rat, after being dried, had been transplanted with success to another rat.

"Some individuals would be put into storage for long periods of time, brought back to normal existence for other periods, and permitted in this manner to live for several centuries. We should remember the utopias of today are sometimes the realities of to-morrow."

## Pacific Fisheries

**Fifty-Three And A Half Million Pounds Caught In October**

More than fifty-three and a half million pounds of fish were landed during October for the salmon, herring, and pilchard fisheries of British Columbia. In the total were nearly 27,750,000 pounds of salmon, more than 16,155,000 pounds of herring, and almost 9,700,000 pounds of pilchard.

Fifty-three and a half million pounds is a lot of fish in any man's reckoning anywhere, and the figures give some idea of the wealth of Canada's Pacific coast fisheries resources and the scale of fisheries operations. But big as the October figures may seem to the layman, they're often exceeded.

More than twenty-five different species of food fish and shellfish are taken commercially on the Dominion's Pacific and, in addition, the yearly catch includes whales, fur seals, and some fish which are used for other than food purposes. The salmon, halibut, herring, and pilchard fisheries are the "Big Four" and are mainly responsible for giving British Columbia first place among the Canadian provinces from the standpoint of the marketed value of annual fisheries production. At the same time, several of what may be called the fisheries of secondary importance also add very tidy sums to the value aggregate.

## Might Run Into Trouble

**Poaching On Preserves Of Opposite Sex May Be Risky**

Plain and fancy cooking is now being taught among other subjects, to would-be handymen attending at a London Institute.

Versatility may be an admirable virtue, but possession of it is not entirely free from snags.

We have always been led to believe that most men admire a woman who can conjure up appetising dishes in the kitchen. But isn't that admiration liable to diminish once man himself has been initiated into culinary mysteries ad can prepare a soup or a souffle as expertly as his wife?

And, reversing the procedure, would a woman look up to a husband if she shared his ability to mend door bells.

We are inclined to think not, and to suggest that this business of poaching on the preserves of the opposite sex should not be carried too far.—London Sunday Pictorial.

## The Closest Shave

**Machine Will Remove Print Without Cutting Or Tearing Paper**

A grinding machine of such accuracy that it will "shave" the print off a newspaper without cutting or tearing the paper has been constructed and is in daily use in a Gloversville, New York, factory. When put through this newsprint test, the machine naturally roughens the surface, but the grinding surface is so accurate that it does not wear a hole in the paper anywhere. The machine is used for grinding the surfaces of tanned hides which are used in good-class gloves.

**Ireland's First Steel Train**

The first all-steel railway train in the Irish Free State has just been placed on the run between Cork and Dublin. It consists of five large passenger coaches, a dining and buffet car, a baggage car and a mail car. The coaches are beautifully decorated.

**Record Of Victoria's Voice**

The gramophone record of Victoria's voice made by the Edison Bell Company may not be released for public hearing, but the British Broadcasting Corporation will be allowed to keep a specimen record in its library.

Cure of scurvy by lemon juice was noted by physicians as early as 1745

CHINA CLIPPER COMPLETES ROUND TRIP

Capt. Edward Musick

The big flying boat "China Clipper", completed her round trip to Manila and back to California. She cut a six-weeks' journey by boat into two six-day flights, and her average speed for the 16,000-mile trip to Manila and back was two miles a minute. The captain of the giant plane, Captain Edwin C. Musick, has a most remarkable flying record. He learned to fly 22 years ago and since that time has travelled over 1,000,000 miles in airplanes. Musick, himself, is prouder of a record which is figured in other measures than percentages. No serious accident has ever befallen any aircraft of which he was the pilot, and no injury has ever been caured to any passenger in any of his planes.

## Humanity Is Selfish

**Inclined To Save Own Possessions At Cost To Others**

Chinese peasants near Hsachow, in Kiangsu province, broke the dykes of the Yellow river the other day to save their farms from being flooded. Their stunt worked, and their farms were saved—but the river inundated an enormous area downstream, and as a result more than 600,000 people have been rendered homeless. It is seldom that the shocking cost of the normal human instinct to save one's own regardless of the price others must pay is more vividly illustrated. And yet these Chinese peasants were not, after all, much worse than their more enlightened fellow humans in other lands. What about rich Indian trial nations which create widespread want by reducing production to preserve individual investments? What about great agricultural communities which destroy ripened crops to protect prices, while other folk go hungry? The motivation is the same—and the effect is not, after all, so very different.—Vancouver Sun.

**Proved Himself Eligible**

"Do you want a boy?" he asked of the magnate of the office.

"Nobody wants a boy," replied the magnate, eyeing Him sharply.

"Do you need a boy?" asked the applicant, nowise abashed.

"Nobody needs a boy," came the discouraging reply.

"Well, mister," he inquired, "do you have to have a boy?"

The magnate collapsed.

"I'm sorry to say we do," he said, "and I guess you're about what we want."

## Live In Lonely Splendor

**Explorer Finds Tribe Of Yodellers In New Guinea**

That a tribe whose men speak "in pretty yodelling tone" and carry bows and arrows, stone axes and human daggers has been discovered in the White River Valley, New Guinea, has just been reported to the Government of Australia by M. Hides, an explorer. Reaching the valley, Hides and his party were held spellbound by the scene of wild and lonely splendor. "We have never seen anything more beautiful," states the report, "and found a population such as one sometimes dreamed of." All the people were short of stature, clean, light-skinned, and wore girlish mops of brown fuzzy hair adorned with flowers. Friendly to the expedition at first, the people later refused it food, and the explorers had to fight for sustenance.

## The Western Prairie

**Despite Cruel Drawbacks, The Lure Holds Man To The Soil**

The prairie is like a beautiful seductive woman whose every movement is rapid and effective. She entices men with the fecundity of her soil, and once they have fallen to her charms she proceeds to crush them. In winter she tries to kill them with her frosts and blizzards; in summer she burns their crops with her sun or cuts them down with hail. At the end of summer she will freeze their wheat black as it stands unless they forestall her; yet, because men are men and she is sometimes kind, they stay with her.—E. M. Hinds in Empire Review.

## Easy to Cut -- Easy to Piece

PATTERN 5501

Winter's the time for quilting, and how fast the hours fly when one is engrossed in so profitable an occupation. "Colonial Pavement" takes its inspiration from the rich mosaic pavements of Washington's time. It's an easy quilt to cut and piece, for with most patches the same width, the material can be cut in strips. Straight pieces are always easier to sew, too; with this quilt you start at the centre. Just two materials are required.

In pattern 5501 you will find the Block Chart, an illustration for cutting, sewing and finishing, together with yardage chart, diagram of quilt to help arrange the blocks for single and double bed size, and a diagram of block which serves as a guide for placing the patches and suggests contrasting materials.

To obtain this pattern send 20 cents in stamps or coin (coin preferred) to Household Arts Dept., Winnipeg Newspaper Union, 176 McDermot Ave. E., Winnipeg.

There is no Alice Brooks pattern book published

# Definite Steps Are Taken Towards Right Of Canada To Amend Its Constitution

One of the anomalies of Canada's political structure was a bit nearer elimination as a result of the Dominion-provincial conference. The gathering initiated definite steps towards the exercise by Canada of the right to amend its own constitution, a right enjoyed by other Dominions of the British Empire.

The province of Quebec has stood out against Canada possessing the right to amend the terms of the British North America Act, the national constitution since 1867, but at the conference Premier L. A. Taschereau of that province announced he had withdrawn his opposition. New Brunswick was the only province to raise a dissenting voice to the resolution of the conference's constitution committee favoring constitutional reform on a broad scale.

The British North America Act is a statute of the British parliament and can be amended only by the British parliament. It defines the respective powers of the parliament of Canada and the legislatures of the provinces.

The decision arrived at by the conference was that the B.N.A. Act stood in need of amendments now and might need further amendments in future and that Canada, like other Dominions, should have the right to enact the amendments without recourse to the British parliament.

The chief ground of Quebec's reluctance to consent to Canada taking over the control of its own constitution has been fear of the invasion of the rights enjoyed by the French-speaking minority. Under the constitution as it stands these are guaranteed and there has been a tendency to regard the British parliament as less likely to be swayed by racial antagonisms and prejudices than a Canadian authority.

Then, too, there is the claim that the United Kingdom is bound by the ancient treaty with France under which Canada was ceded to Great Britain to respect the rights of French-Canadians to the free use of the French language and the free practice of their religion.

This viewpoint has made Quebec prominent among the provinces in the assertion of provincial rights and in opposition to any measures which might cut down the powers of the provincial legislatures.

In commenting on the report of the constitutional committee of the conference Premier Taschereau said he had changed his opinion on the constitutional question. The reasons were the generosity of all federal administrations, of whatever political perusion, and shown towards minorities and evidences of a similar attitude on the part of provincial governments from the time of Confederation onwards.

The resolution on constitutional amendment was adopted by the committee by a vote of nine to one, the negative vote being cast by Hon. J. B. McNair, attorney-general of New Brunswick. An official statement said Mr. McNair was unable to agree with the resolution in its entirety but it was not learned what his objection was.

Hon. A. W. Roebuck, Ontario attorney-general, at the opening of the conference, presented a memorandum outlining in a general way the method that should be adopted in facilitating amendments to the constitution. At the close of the committee's sessions he presented the resolution setting out his ideas in concrete form.

The resolution suggested an imperial statute be obtained, with the approval of the Dominion and provincial parliaments, empowering the Dominion et amend the British North America Act without recourse to the imperial parliament, with certain reservations and under certain conditions.

The Dominion parliament would have power to amend the act with respect to matters which concern exclusively constitution and privileges of the house of commons and senate of Canada, the specific clauses being set forth.

With respect to all matters pertaining to the provinces exclusively, and in all matters of mutual concern to the Dominion and the provinces, amendments would be made only by joint action of the house of commons and senate, and of two-thirds of the legislative assemblies and legislative councils if any, representing 50 per cent. of the people of Canada.

## For Fox Breeders

**Report Published Showing Result Of Scientific Investigation**

An account has recently been published of the progress made up to the present on the main projects investigated at the Experimental Fox Ranch at Summerside, Prince Edward Island, of the Dominion Experimental Farms, so that fox breeders may have the benefit of the information secured. It is not considered that a final conclusion has been reached with regard to any one project, and further investigation will be undertaken, as circumstances permit, upon all the projects.

The research work has been divided into five main groups (1) nutritional requirements of foxes; (2) internal and external parasitic infestation; (3) inheritance of the inherent traits of foxes; (4) sundry physiological processes, and (5) general ranching methods.

The nutritional problems have been approached from five different angles —(1) the influence of the different contents of the diet, such as protein, fat, vitamin, caloric value; (2) determination of the normal annual fur cycle, and the dietary factors that induce the most favourable results during the entire annual cycle; (3) determination of the normal annual cycle of breeding foxes, and the dietary factors that induce the changes in a most natural manner; (4) the fitness of the seasonal nutritional and other environments of foxes in the wild state to meet the seasonal functions and the changes of foxes in captivity; and (5) disturbances due to the deficiencies in the diet, the so-called deficiency diseases. These and other matters of importance to the fox breeders of Canada will be found in the progress report of the ranch by G. Ennis Smith, the superintendent, issued by the Publicity and Extension Branch, Dominion Department of Agriculture, Ottawa.

## How Olympics Originated

**Ancient Greek Games Held On Plain Called Olympie**

It is very popular to apply the word Olympic to any great celebration of sport. The word is derived from the name of the plain, Olympia, where the ancient Greek games were held.

In those pagan days the ancients credited the gods with being human, and accordingly did all they could to please them. One of the ideas of their games and entertainments was to entertain the deities who dwelt on Mount Olympus. The most famous of the games were those specially arranged for that purpose, and they were named Olympic. A period of four years elapsed between the games. That period was called the Olympiad, and from the year 776 B.C. was used to measure time. The Olympic games thus denoted a very special exhibition, and that is why the word applies to the greater festivals of sport.

## Newspaper Advertising

**Is Dominant Force In Bringing Buyers To Stores**

An important statement was made in a recent week at a conference in New York city of the representatives of associated business papers. Ernest C. Hastings, editor of Dry Goods Economist, declared that the newspaper was the dominant force in bringing buyers into the retail stores. Department stores spent approximately $150,000,000 last year for newspaper advertising, he said, twice as much as was spent in other forms of advertising. "Newspapers always have been and always will be the dominating force to bring people into the store," Hastings said. "Without local papers, the department and dry goods stores of this country would soon become as dead as a morgue."

**Accomplished His Purpose**

To get rid of storage and hauling charges, an auctioneer was trying to auction off some old automobiles.

Auctioneer—How much am I bid for this car?

Bystander—Nothing.

Auctioneer—Sold!

Bystander—but I don't want it. I way only joking.

Auctioneer—Take it away or I'll sue you. You made a bid.

He: "Did anyone ever tell you how beautiful you are?"

She: "No."

He: "Then where did you get the idea?"

Rudy—If you would give me only the least hope, I—

Clara—I have given you the least hope I have given to any man.

# Farm Experts Wrestling With Agricultural Problems In Western Drouth Areas

"Finding methods to peg down the western soil."

This was the expression used by Dr. E. S. Archibald, of Ottawa, to the Regina Kiwanis Club, in a speech describing the work being done by the federal and provincial scientists and farm experts who are wrestling with agricultural problems in the drouth areas of the three prairie provinces.

Dr. Archibald intimated that because of the money made available and the interest of the scientific staffs and farmers, a great project aimed at reclamation was getting under way in western Canada.

One of the most interesting stations where work was being done on methods concerned with "pegging down" the soil was at Mortiach. A semis research laboratory was being established at Swift Current.

Dr. Archibald, a former Nova Scotian, is the head of the Dominion experimental farm system, and was in Regina for a three-day conference of the scientists who are trying to solve problems created by drouth and pests. He was introduced by a former pupil, Hon. J. G. Taggart, Saskatchewan minister of agriculture, who was a student at the Truro Agricultural College when Dr. Archibald was a lecturer there.

Dr. Archibald explained that the committee, acting with money voted for rehabilitation at the last session at Ottawa, was receiving the co-operation of the Dominion's farm and scientific experts and those of the western provinces and universities. These men, acting in groups, were trying to find out how to stop soil drifting, to discover grasses that would grow in drouth areas, to give expert advice on cultivation in areas with differing soils, to lend assistance on water schemes and dams, to find out what could be done with badly drifted areas that were now nothing but a series of sand dunes.

It was realized that the big job was to get the soil "pegged down" so that drifting might be stopped.

Strip farming was being tested, with the co-operation of farmers. The experts could make discoveries and offer suggestions but the job itself would have to be done by the farmers, not by the government or government committees. Dr. Archibald was rather hopeful of results from strip farming.

Created wheat grass, said Dr. Archibald, was proving its worth in dry areas. The government farms were now producing tons of seed of the best strains.

Before the committee went into action there were 25 illustration stations in the west. Now there were 40, and 27 of these were in southern Saskatchewan. Five thousand applicants had been received for advice and aid on water schemes. Some of these were farm schemes, others were community projects. One of the things that had been discovered was that about 90 per cent. of the dugouts in western Canada had not been properly constructed. This was being inquired into with the object of finding the best method.

## In Position To Know

**Woman Could Not Be Told Anything About War**

Not long ago a Windsor woman was asked to sign a petition against war. She said she was not particularly interested in the petition as she thought it was only an election dodge anyway.

"If you knew anything about war, you would sign," the woman was told.

"Oh, I know something about war," replied the other woman. "Two of my brothers were killed, my other brother was wounded and my husband has never recovered from the effects of his wounds."—Windsor Daily Star.

## Dry Area Water Plan

**Residents In Drought Areas Are Taking Great Interest In Scheme**

Widespread interest on the part of residents in the drought area of the prairies had developed as a result of the work of the water development committee, working under the Prairie Farm Rehabilitation Act, according to reports presented the committee meeting in Regina.

Since the committee started its work this year a total of 5,000 applications had been received from individuals for private irrigation schemes consisting in construction of dug-outs, stock watering dams and small irrigation projects.

## Helping The Lumbermen

**New Trade Agreement Means Much To British Columbia**

British Columbia lumbermen have reason to be jubilant over the provisions of the Canada-United States trade agreement because where they were shipping less than 100,000,000 feet of western hemlock and Douglas fir—of which this province has a monopoly—they are now given a quota of 250,000,000 feet board measurement a year.

The result of this concession, according to preliminary estimates, will mean the employment of another two thousand men in the forests of this province. It is difficult for the layman to put into statistics what this new employment can be worked out at on a dollar-and-cents value for the ordinary worker. But the fact is obvious that for every hundred men who go into the forests of British Columbia to take out logs for the manufacture of timber for export, there must be at least five hundred persons who derive either direct or indirect benefit.

British Columbia's forest industry implies a demand upon factories which turn out wearing apparel and those who produce food. It will be possible for workers in the forests to buy these things cheaper after January 1, 1936, than it has been during the last five years.

The agreement is mainly to help the consumer. Therein lies its chief virtue.—Victoria, B.C., Times.

## Was Decided Success

**Exhibitors Enthusiastic Over Royal Winter Fair This Year**

The Royal Winter Fair, largest agricultural fair in the Dominion and second only to the international exposition at Chicago, is over for another year.

Officials rested with satisfaction that the fair this year was an undoubted success, with larger entries, larger attendances and great benefits to exhibitors.

So large was the entry this year many exhibitors were forced to keep their stock on their own farms until judging days arrived.

"They said it would be 25 years before we filled the horse palace," said one official, "and we had it filled this year on the second day of the fair."

Exhibitors of farm implements were equally enthusiastic. One exhibitor said farmers were showing a great deal of confidence that seems to surpass that of last year."

Livestock sales were brisk. One exhibitors sold a cow for $1,800 and another a bull for $1,000. The champion Percheron sold for $3,000 and another for $1,250.

## Famous Pigeon

**Lost A Leg While Flying Through Barrage In Great War**

The world's most famous pigeon, which lost a leg flying through a barrage in France with military information for the United States army, died recently at Honolulu, aged 17 years, 11 months.

John was hatched on a French battlefield in January, 1918. Before he was many months old he was braving barrages in carrying important messages. He was wounded while flying from a front-line dugout to headquarters.

Men below saw a shell explode near him. The concussion tossed the pigeon upward, then he fell. As the bird dropped, he struggled to regain altitude. Finally he did so, and reached headquarters covered with blood, feathers ripped out and one foot gone.

The pigeon will be stuffed and sent to the aeronautical museum at Wright Field, Dayton, Ohio.

**Calendars Confiscated**

Some 10 tons of old-style Chinese lunar calendars were confiscated in a series of recent raids in Shanghai and burned in the Chinese government's drive to abolish use of the antiquated method of calculating the date.

Men of the Shilluk tribe of Africa spend years in training their hair to grow into curious hat-like shapes. They take great pride in their coiffures.

**Automobile Production**

Automobile production in Canada during October reached the highest total reported for any October since 1929. The output totalled 8,313 motor vehicles, an increase of 120 per cent. over the production in October of last year. 2129

# The SNAPSHOT GUILD

HOME LIFE

Family gatherings offer unusual opportunities for story-telling pictures.

A reader of the Snapshot Guild sent in the above picture as an example of what can be done by an amateur photographer with an inexpensive camera.

Photographically it is an excellent picture and this Guild member is to be congratulated on his work.

To the Snapshot Guild, however, this picture represents much more than an example of good photography. It tells a real story. As we visualize the story behind the picture it takes us into the homes of thousands of typical Canadian family groups gathered at the home of parents for the day or evening.

It is just such pictures that add interest and value to your snapshot collection and every year, as the children "grow up," you will cherish such snapshots more and more. Record pictures, such as scenes, buildings, monuments and other places of interest you snap in your travels are important and interesting, but don't overlook the innumerable opportunities for intimate, story-telling pictures of the family.

With present day film and Photoflash or Photoflood bulbs you can take indoor pictures with any camera equipped for "time" exposure. The picture above was taken with an ordinary camera with the aid of a No. 20 Photoflash bulb.

Here is what you do. Place your camera on a tripod, table or something solid so that there will be no movement of the camera when the picture is taken. Locate your subjects, or group in the finder. At arm's length to the side of your camera place an ordinary flour lamp; to get full efficiency from the light, remove the shade and hold a white card or a pillow case in back of it to serve as a reflector. If in a group picture of this kind you find that the distance at which the Photoflash will be placed is about 10 feet from the group use stop f.11 with an anastigmat lens or No. 1 stop on single lens cameras or box cameras. With double lenses not of the anastigmat type, use the largest stop. With the current in the lamp turned off replace the house bulb with the Photoflash bulb. Set your camera for a time exposure; open the shutter and instantly "turn on" the Photoflash bulb which you have placed in the floor lamp. There will be a vivid, instantaneous flash of light. Immediately after this flash close the shutter of your camera and you have your picture.

If you prefer you can take a snapshot of such a group, providing you have a camera with an f.6.3 lens or faster, using Photoflood bulbs. It will be necessary to employ two floor lamps; place one lamp about 5 feet in front and a little to the right of your subjects; place lamp number two about six feet to the front and left of the group. Tilt the shades on the lamps so that the light is cast over the entire group. Place two Photoflash bulbs in the lamp to the left and one or two in the one to the right. Be sure to use super-sensitive panchromatic film for best results for snapshots with this kind of a set-up. With film slower than super-sensitive short time exposures can be made with Photoflood bulbs.

Set the diaphragm at f.6.3 and the shutter speed at 1/25 of a second; turn on your Photoflood lamps and—snap—you have made a snapshot at night indoors.

When shades on home lamps cannot be tilted or are of a kind that does not permit directing the light on the subject, remove the shade. In such cases, some kind of reflector back of the lights will throw considerably more light forward.

Don't forget these important pictures around the home. Get some Photoflash or Photoflood bulbs (they can be purchased in almost any store where they sell photographic supplies), load your camera with super-sensitive panchromatic film and take a few snapshots at night indoors. It's a lot of fun.

JOHN VAN GUILDER.

**A Good Suggestion**

Exchange of Canadian and United States students so they might learn first-hand about their neighbors were doing, not only in commercial progress, but also in education, art, music and poetry, was recommended by Norman Armour, United States minister to Canada.

The standard pitching distance in horseshoes from peg to peg, or from peg line to peg line, is 40 feet.

Russia claims to be exporting more automobiles than it manufactured in 1929.

**Almagivers Are Fined**

Fining almagivers as a means of freeing the streets of Barcelona, Spain, of beggars, proving successful, municipal police are empowered to fine on the spot persons caught giving alms to beggars, the fines ranging from two to 50 pesetas, according to the gravity of the offense.

"The next big war will be fought by chemists," we read. Prescription taking the place of conscription.

Motor lifeboats on large ocean vessels are soon to be equipped with radio telegraph equipment.

## Make These in Warm Tweedy Wool

Household Arts by Alice Brooks

You Can't Have Too Many Pairs

PATTERN 5241

One pair of gloves doesn't make a winter—not when crocheted ones are so popular and at the same time so easy to make. Here is a pair that you are sure to want to add to your glove wardrobe. Fitting snugly about your wrists to keep out winter winds, are gauntlet cuffs worked in a loose star stitch in bright stripes of color. The hands are in easy, plain crochet. You'll be seeing them on many well-dressed hands soon, so get busy with your crochet hook!

In pattern 5241 you will find complete instructions for making the gloves in a small, medium and large size (all given in one pattern); illustrations of the gloves and of all stitches used; color suggestions; material requirements.

To obtain this pattern send 20 cents in stamps or coin (coin preferred) to Household Arts Dept., Winnipeg Newspaper Union, 176 McDermot Ave. E., Winnipeg.

There is no Alice Brooks pattern book published

# Little Progress Has Been Made In Measuring Up To Nature's Plan Of Lighting

Let's take a look at nature's lighting intensities as contrasted with man's, and see for ourselves what little progress we've made. Sunlight measures around 10,000 footcandles. But you ask, what is a footcandle? A footcandle is a standard unit of light just a as degree is a measurement of temperature. It is easy to understand. All you have to remember is that it represents the amount of light a candle will cast on a surface placed one foot away.

Maybe 10,000 footcandles of light is a bit uncomfortable for reading black print on white paper, so you draw yourself under the shade of a tree where there is upwards of 10,000 footcandles. With what pleasure and eye comfort you read here; or take your book to the back porch. On a clear day you will enjoy light equivalent to 500 footcandles. Or near the window, indoors, even on only a fairly clear day, you will find your eyes benefiting from an intensity of 200 footcandles.

Then night compels you to go indoors, where you may use your eyes more for close work—such as reading and sewing—than during the daytime. But have you 1,000 footcandles of light to help accomplish your task with ease and comfort? By no means. Nor 200 either. Most of us turn on a 60-watt bulb in a bridge lamp and proceed to read a newspaper or book under three to five footcandles—less than one-half of one per cent. of the idea we struck under the shady tree.

It is under such poor seeing conditions that eyestrain develops, an eyestrain eventually leading to defective vision. Practically all of us are born with normal vision, but by the time school age is reached we have already formed the habit of reading and working in half light. This we continue to do year after year until our eyes finally rebel and only the kindly service of an eyesight specialist can compensate for our needless abuse.

In these days of business efficiency you would think that office and factory lighting would be equally modest. What are the facts? If you are fortunate enough to have your desk or table near a window, you may have 50 footcandles of illumination. But if you are 10 feet away you may be getting only eight and at some distance from the window the intensity may be as low as one or two footcandles. With all the artificial light turned on the amount may be increased at this point to six or seven, or eight footcandles, less than a hundredth of what natures gives us under a tree.

The clearness, quickness and ease with what we see objects depends upon four important characteristics of the objects. These are the sizes of the objects, its contrast with its background, the amount of light falling upon it, and the time available for looking at it, however, only one of these factors—quantity of light—is usually controllable. In sewing for example, the size of the thread and its contrast with the cloth are fixed by the nature of the sewing to be done. We can take longer to do the work, or we can improve the lighting. Fortunately, the handicap of small sizes or low contrasts can be offset, in most cases, by an increase in the amount of light upon the work. Hence, a knowledge of these fundamental factors will aid in deciding how much light is needed for various tasks.

A newspaper is more difficult to read than most books—even though the letters are of identical size. In fact, measurements show that the newspaper should receive three times as much light as the book in order that the two tasks should be of equal visibility. In this case the handicap of lower contrast is compensated for by more light.

When driving an automobile, it is often necessary to see signal or signs in a fraction of a second. But it takes time to see this time has been accurately measured and it is now known that we often fail to see signals because their visibility is too low for the short time available for seeing. Higher intensities of illumination shorten the time required to see—or, in other words, increase our speed of vision.

## Decree Will Be Approved

**German Colleges Will Not Admit Girls Who Cannot Cook**

There have been so many actions by the Hitler government that have called forth worldwide disapproval, but to say angry, that it is refreshing to turn to one which is very likely to evoke the very opposite sentiment. Germany's Minister of Education, Bernhard Rust, has just issued a decree that German girls who do not know how to cook will not be admitted to colleges or universities. After the spring of 1937 sixteen-year-old girl students must pass an examination in the fundamental duties of housewives before being accepted—and their mothers must teach them.

That sounds to us like sound commonsense. It has never been quite clear why so many girls regard ability to administer a house as derogating from their dignity as college or varsity students, and hold that it is belittling to the possession of a university degree to possess also a sound knowledge of cooking. If girls only realized that the young men who are looking around for wives infinitely prefer a good meal cooked at home to a full course dinner in a restaurant and have more respect for the girl who helps her mother with the housework than for the girl who affects to consider doing so a humiliation!

The young housewife who knows how to cook also knows how to shop, and is by training economical. And that is one of the most invaluable virtues any young housewife can possess, nowadays. Young men, not being entirely blind even where their choice of wives is concerned, have a habit of appreciating such qualities even more than the ability to wear a pretty dress gracefully or to dance and stay up till three and keep good-tempered all the time.—Montreal Star.

## Citizens Fear Famine

**Granaries Of Bessarabia Almost Empty After Crop Failure**

Bessarabia, prairie province on the Russian border, faces the winter with granaries almost empty, and with citizens facing the possibility of grave famine.

The Rumanian ministry of interior, after months of silence, has acknowledged that the plight of Bessarabians is serious, and has issued a public appeal for aid in warding off malnutrition and actual starvation in the extensive region.

Not for years had Bessarabia experienced so severe a shortage as that of last summer. Thousands of head of livestock died of thirst, or starved because of lack of vegetation. Many districts reported that crops were virtually a total failure, and that even now, when harvests should have filled warehouses and peasants' barns, bread has become a rare article.

There was a little barley, and the harder weeds grew rather well. So, lacking ingredients, peasants have been making a sort of bread from a mixture of ground barley, weed seeds and bran. For a time the censor forbade publication of these dismal reports in Rumania.

## March Of Progress

**Social Credit Sure To Supersede Present Form Of Government Says Aberhart**

Social Credit in Quebec is inevitable, Premier William Aberhart, of Alberta, said on his arrival in Montreal to discuss Alberta finances with R. J. Magor, Montreal business man, who has been engaged to study the financial condition of the province.

With Premier Aberhart were Hon. C. Cockroft, Alberta provincial treasurer, and Hon. W. A. Fallow, Alberta minister of public works and roads.

Social Credit will come in the same way as candles were changed to electric light and ox-carts to automobiles, Premier Aberhart said. "That's progress."

Visitor—"Does your husband know much about horses?"

Wife—"Rather; the day before the race he knows which horse is sure to win, and the day following he knows why it did not."

Man: "So you've bought a second-hand automobile, have you. Do you drive or does your wife drive it?"

Friend: "Neither of us drive it. We coax it."

A new nine-hole golf course in Bathurst, South Africa, is said to be the cheapest in the world, the green fee being six cents a round.

Patsy was still a very little girl, but quite interested in new words. After hearing a conversation between two elders, she said: "Mother, what is temperament?"

Mother (absently)—Oh, just a temper with a ruffle on it.

Teachers of South Africa, who mix in politics may be curbed.

## Pick Cotton!

COTTON to the rescue! The woman who has a taste for smartness in dress and yet must be governed by the limitations of her shopping budget, can really take courage this year. For Cotton—honest, inexpensive Cotton—is now a high fashion for every hour of the day or evening, and when you pick Cotton, you're picking one of the smartest of fabrics for all sorts of costumes and accessories.

And this is only one of the many fashion trends that are helping women to Clothes Smartness just now, without ruining their finances at the same time. Today, good taste plus a little careful planning is all you require to be smart as you please.

Maybe I could help you with that Summer Wardrobe you're thinking about. Drop me a little note—(giving me all the Details of your appearance, of course!)—and I'll gladly answer any questions and make suggestions.

—That's what I'm here for!

Jane Dix

### IN LOVING MEMORY

In loving memory of our dear daughter and sister Jennie Winnifred Bell who passed away May 24th 1934.

We loved thee in life, thou art dear to us still,
But in grief we must bend to God's holy will,
Our sorrow is great, the cross heavy to bear,
But angles will tend our daughter with care
Gone but not forgotten
Ever remembered by mother, father, sisters and brothers.
